

# Series TWF 4000 363 PSI

Weight: approx. 265 lbs.

Dimensions: inch

Designs and performance values are subject to change.

# TWIN Filter

## Series TWF 4000

### 363 PSI

#### Description:

The TWIN-filter combination of the type TWF 4000 are suitable for a working pressure up to 363 PSI.

The connection dimensions and outside dimensions of these elements are according to DIN 24550, T4.

The two level filter element is divided in a main and an auxiliary level with different filter fineness and different filter surface area. The pressure difference valve VD1 is located between the main level HS (fine filter) and the auxiliary level NS (coarse filter).

The total fluid flow Q will be directed through the main level of the two-level element as long as the pressure difference on this filter element is greater than the opening pressure of the pressure difference valve VD1. If the pressure difference valve VD1 is opened the partial flow Q1 will be filtered over the auxiliary level.

The breather connection E1 on the filter's lid can allow the offset of another partial flow Q3. This partial flow Q3 will only be filtered by the auxiliary level NS of the filter element and is even available if the VD1 is closed.

The filter elements consist of star like folded filtration material, which is placed around the supportive tubes from the outside and which is adhered to the end caps. The direction of flow is from the outside to the inside. Filter elements can only be operated in the displayed arrangement. In order to prevent reverse installation, the filter housing has a mechanical lock, which does not allow the filter lid to be screwed on the filter if installed in a wrong way.

Eaton filter elements are known as elements with a high intrinsic stability and an excellent filtration capability, a high dirt-retaining capacity and a long service life.

Eaton filter are suitable for all petroleum based fluids, HW-emulsions, most synthetic hydraulic fluids and lubrication oils.

Ship classifications available upon request.

#### 1. Type index:

##### 1.1. Complete filter: (ordering example)

**TWF. 4000. V. 1. 2. FS. 8. 9. S14. -. VS5**

## Technical data:

design temperature:	-4°F to +212°F
operating temperature:	-50°F to +176°F
operating medium	mineral oil, other media on request
max. operating pressure:	363 PSI
test pressure:	522 PSI
process connection:	SAE-flange 3000 PSI
housing material:	EN 573-EN-AW6082-T6
sealing material:	Viton (FPM), Nitrile (NBR) or hydrated Nitril-Butadien-Rubber (HNBR); WS 20.357
installation position:	vertical
measuring connections:	BSPP ¼
drain- and bleeder connections:	BSPP ½
volume tank:	2x 5.3 Gal.

Classified under the Pressure Equipment Directive 2014/68/EU for mineral oil (fluid group 2), Article 4, Para. 3.  
 Classified under ATEX Directive 2014/34/EU according to specific application (see questionnaire sheet-no. 34279-4).

## Test methods:

Filter elements are tested according to the following ISO standards:

ISO 2941	Verification of collapse/burst resistance
ISO 2942	Verification of fabrication integrity
ISO 2943	Verification of material compatibility with fluids
ISO 3723	Method for end load test
ISO 3724	Verification of flow fatigue characteristics
ISO 3968	Evaluation of pressure drop versus flow characteristics
ISO 16889	Multi-pass method for evaluating filtration performance
