

Flow measurement solution used in the broadest range of metering applications

APPLICATIONS

Measurement of

- Hydrocarbon liquid or gas
- Water
- Steam

BENEFITS

Automation cost reduction through

- LAN-style wireless
- Imbedded power source
- Factory integrated flowmeters with Scanner* flow computer

FEATURES

- High scalability
- Cost efficiency
- Custody-transfer-caliber measurement
- Smart multivariable transmitter (MVT)
- Wellhead tubing and casing pressure monitoring
- Turbine totalization
- Electronic flowmeter (EFM) and remote terminal unit (RTU) functionality
- Proportional—integral—derivative (PID) controller

Experience low-power measurement using a stand-alone Scanner* Series 2000 flow computer or a network of Scanner computers in a large-scale SCADA solution. Scanner Series 2000 computers are available in wired or wireless configurations, ready for installation.

Scanner Model 2000 flow computer

- Wired communications
- Three conduit entries (capacity for five with optional terminal housing)
- MVT, turbine mount, or remote mount
- Explosion-proof[†] and intrinsic safety approvals
- Expandable I/O
- FOUNDATION[®] fieldbus communications available

Scanner Model 2100 flow computer

- Wireless short-haul communications
- Five conduit entries (capacity for eight with optional MVT adapter)
- MVT or remote mount
- Explosion-proof[†] approval
- Easy battery access

Scanner Model 2200 flow computer

- Wireless long-haul communications
- Large weatherproof[†] enclosure with integral shelf for radio
- Powered by lithium battery, DC, or solar power
- Available with integral charge controller or DC power supply and a rechargeable battery
- Generous I/O capacity

[†] Explosion-proof, weatherproof, and intrinsically safe as defined by Canadian Electrical Code (CEC), National Electrical Code (NEC), Atmosphères Explosibles (ATEX), International Electrotechnical Commission (IEC), and European Commission (CE) codes.

Scanner Series 2000 flow computers are among the most versatile flow measurement devices on the market. Each device can operate independently as a flow computer, RTU, process controller, or node in a comprehensive SCADA network.

The first-generation Scanner Model 2000 EFM flow computer provides a dependable replacement for manual chart recorders and pressure and temperature indicators.

The Scanner Model 2100 flow computer builds on the Scanner Model 2000 computer functionality with short-haul SmartMesh® wireless sensor networking for cost-effective communication of measurement devices, twice the battery capacity of the Scanner Model 2000 computer, and added conduit entries.

The Scanner Model 2200 flow computer completes the Scanner Series 2000 flow computer portfolio with a weatherproof package, providing ample space for a radio or other long-haul communications devices, charge controller or DC power supply, and rechargeable battery for solar-powered installations.

All three Scanner Series 2000 flow computers share common computational capabilities, integral lithium battery power, and an easy-to-use, full-feature interface software for configuration and maintenance. Models vary in packaging, communications, I/O capacity, and hazardous-area certifications.

Versatile measurement

Scanner Series 2000 flow computers can measure standard volume, mass, and energy flows of saturated steam and many types of gases and liquids. All measurements are custody-transfer caliber and are supported with records that comply with requirements such as the Sarbanes-Oxley Act, Federal Energy Regulatory Commission FERC 23, and Alberta Energy Regulator Directive 17.

The Scanner Series 2000 flow computers can operate autonomously on an internal lithium battery for a year or longer. When external power is applied, the lithium battery pack is on standby to ensure uninterrupted measurement without an expensive reserve power system. Using an integrated sensor for differential pressure, absolute pressure, and temperature measurements, this self-contained flow computer is an efficient alternative to chart recorders. When connected to additional flowmeters, a single Scanner Model 2000 flow computer is powerful enough to measure the gas, oil, and water from a two- or three-phase separator. The Scanner Model 2000 computer is compliant with a comprehensive list of flow measurement standards to satisfy custody transfer applications.

Scanner flow computers can be factory mounted and configured to Camero orifice or cone meters for cost savings and efficient field commissioning. They can also be remote mounted to automation devices and flowmeters, including our gas and liquid turbine and ultrasonic flowmeters.

Data logging

Scanner Series 2000 computers with EFMs can monitor multiple values simultaneously, including those used solely for process automation. The Scanner Series 2000 computer delivers higher-resolution data for process system analysis compared with conventional RTUs and flow computers.

In addition to recording daily logs, users can log up to 16 measurements as frequently as every 5 s for monitoring flow-sensitive processes such as well startup or well testing. The duration of the interval log varies depending on device memory and configuration.

Control

Scanner Series 2000 flow computers enable threshold values to be assigned to any measured or computed value for controlling a process with a status output. The output can be configured to trigger when one or all selected conditions exceed the threshold and can be latched (requiring user acknowledgment to reset) or unlatched for automatic reset.

When equipped with a 4- to 20-mA output option and a PID control option^{††}, Scanner Series 2000 computers can effectively control process variables such as static pressure, differential pressure, temperature, and flow rate. The output is configured to regulate a control valve or an adjustable speed drive, and control parameters are tuned with the software provided. A Scanner EFM computer can control a single parameter or a parameter in combination with a secondary pressure control.

⁺⁺ Not available with Scanner 2100 EFM computer, FOUNDATION fieldbus communications, or intrinsic safety.

Communication ports: two RS-485 serial, one RS-485/RS-232, and one TCP Ethernet.

PID control.

Scanner flow computer network.

FOUNDATION fieldbus communications

The Scanner Model 2000 computer for FOUNDATION fieldbus is certified by the Fieldbus Foundation[®] for interoperability. The fieldbus network supplies power for normal operations.

A fieldbus host may read differential pressure, pressure, temperature, and flow rate from analog input blocks, and additional measurement variables may be read from transducer blocks. The remaining RS-485 serial port may be used to collect Modbus data or history logs, configure a flow run, or maintain flow run configurations.

Distributed automation solution

When automation requirements exceed the capacity of a single flow computer, our networking innovation provides a cost-saving solution. Through the deployment of multiple Scanner flow computers and a web-accessible Scanner 3100 computer network manager, our distributed processing solution equips users to access data for up to 22 flow streams through a single device and provides enhanced data protection.

Unlike centralized automation systems in which lost or delayed data transmissions threaten the integrity of flow computations, the Cameron solution is, by design, immune to these risks. Each computer measures and logs the flow data at the point of measurement before sending a copy to the network manager, so even if a transmission fails, the data remains secure and API compliant. Should communications be interrupted, the Scanner computers and the network manager automatically synchronize to restore missing data records. [§]Compatible with eFCAS, a Cameron solution offered in association with CPU, LLC, and other SCADA products

Other benefits include the following:

- Reduced cost—installation costs are reduced by reliance on two-wire RS-485 communications rather than six or more electrical conductors
- System overload protection—computing capacity increases with each computer added to the network, so the system is not easily overloaded
- Reduced dependency on power—each Scanner 2000 computer can operate for months on a single battery pack; if power is lost, measurement continues uninterrupted
- Local data access—current flow results are displayed at the point of measurement.

Wireless flow computing

The potential for cost savings of up to 50% on flow computer installation has sparked growing interest in wireless communications for the oil and gas industry. However, opportunities for integrating wireless into the flow computer business were limited by conventional automation systems that depend on the failsafe delivery of input data.

Our innovative use of low-power flow computers for capturing primary measurements and computing results—and storing them at the point of measurement—has revolutionized the use of wireless as a viable flow computing option. With its redundant storage technique, operators can optimize their deployments with a combination of Scanner Series 2000 flow computers and wireless or wired communications without compromising data integrity.

Calculations

Scanner Series 2000 flow computers support the following industry-standard calculations:

Flow rate (natural gas, steam, or liquid)

- AGA-3 (1992 and 2012)
- AGA-7
- ISO 5167
- ASME MFC-14M
- Cone
- Averaging pilot tube

Fluid properties

- AGA-8-94 (detail and gross)
- AGA-3, App. F
- GPA 2145
- IF-97 (steam)
- Generic liquid (water or emulsions)
- API 11.1

Wet correction (steam)

- James (orifice meters)
- Chisolm-Steven (orifice and cone meters).

I/O	
Turbine input	Configurable sensitivity adjustment (20–200 mV, peak to peak)
	Frequency range: 0–3,500 Hz
	Input amplitude: 20–3,000 mV, peak to peak
	With the Scanner 2200 computer, turbine input 2 can be used simultaneously as an input status
Process	100-ohm platinum RTD with two-, three-, or four-wire interface
temperature input,	Sensing range: -40 to 800 [-40 to 427]
degF [degC]	Accuracy: 0.36 [0.2] over sensing range at calibrated temperature
	Temperature effect: ±0.54 [±0.3] over operating range
Pulse input	Accepts a signal from a turbine meter or PD meter
	Optically isolated
	Input: 3–30 VDC or contact closure
Analog input	Three-wire sensor interface (0 to 5 V, 1 to 5 V, 4 to 20 mA)
	Sensor power same as external power supply for main board
	Accuracy: 0.1% of full scale
	Temperature effect: 0.25% of full scale over operating temperature range
	Resolution: 20 bits
	User-adjustable sample time and damping
Digital output	Configurable as pulse output or alarm output
	Solid-state relay
	Output rating: 60-mA maximum at 30 VDC
	Pulse output: Configurable pulse duration Maximum frequency: 50 Hz
	Configurable pulse representation (1 pulse = $1,000 \text{ ft}^3$) Based on any accumulator (flow run or turbine inputs)
	Alarm output: Low and high
	Out of range
	Status and diagnostic Latched and unlatched
	Normally open and normally closed
Analog output	4 to 20 mA
	Accuracy: 0.1% full scale at 77 degF [25 degC] Temperature drift: 27.8 ppm/degF [50 ppm/degC]
	Representation of any measured variable (e.g., differential pressure) or calculated parameter (e.g., flow rate)
	Regulates control valve in PID control applications
	Optically isolated
	Resolution: 16 bits
MVT	Linearized digital data for static pressure (absolute) and differential pressure
	Available with bottom ports (gas) or side ports (liquid or steam)
	Compliance with prequalified materials of NACE MR0175/ISO 15156 [†]
	Process temperature: -40 to 250 degF [-40 to 121 degC]
	User-adjustable sample time and damping

[†] This certification does not imply or warrant the application of the MVT in compliance with NACE MR0175/ISO 15156 service conditions in which the MVT is installed.

Stainless-steel Scanner 2000 computer option

For corrosion-free service in harsh marine applications, Cameron offers a 316 stainlesssteel flame-proof^{††} Scanner 2000 flow computer enclosure option.

- Ex d IIC T6 Gb (combustible gas)
- Ex tb IIIC T85 degC Db (combustible dust)
- Ambient temperature: -40 to 158 degF [-40 to 70 degC]

IP 66 rating

The stainless-steel model is 3.4 lbm [1.54 kg] heavier than the standard model. Dimensions are identical. The housing exterior is unpainted, cast stainless steel; nonstructural surface imperfections are common.

To complete the package, the Scanner 2000 computer is coupled to a turbine flowmeter by a 304 stainless-steel tube or connected to a 316 stainless-steel MVT with Inconel bolts. Cameron turbines with ATEX and PED certifications are available upon request.

Commissioning, training, and support services

As a leading provider of flow equipment to worldwide oil, gas, and process industries, Cameron offers a full range of services and expert support to help customers improve productivity, enhance system performance, and increase profitability.

Our skilled field service personnel are trained to maintain, replace, refurbish, and support measurement equipment. Our services include

- measurement consulting
- startup assistance and commissioning
- measurement audits
- field services, shop repair, and calibration
- system health checks and maintenance
- product training and measurement seminars.

MVT specifications

- Linearized measurement for static pressure and differential pressure
- Pressure measurement in absolute and displays in gauge
- Standard MVT has bottom ports, ideal for gas measurement^{‡‡}
- Process temperature: -40 to 250 degF [-40 to 121 degC]
- User-adjustable sample time and damping
- Compliance with prequalified materials of NACE MR0175/ISO 15156^{§§}

MVT Accuracy

IVIVI ACCUIACY		
Differential pressure (DP), %	\pm 0.05 of range for all except 30-in $\rm H_2O$	
	\pm 0.1 of range for 30-in H ₂ O	
Static pressure, %	± 0.05 of range	
Temperature effect	\pm 0.25 of full scale over operating range	
Stability (long-term drift), %	Less than \pm 0.05 of upper range limit (URL) per year over a 5-year period	
Resolution	24 bits	

Effect on DP for a 100-psi Pressure Change

	p

 $^{\dagger}\,200\times300$ psi has a zero shift of .007% and a span shift of .01%.

Data reporting tool

The Scanner computer data manager software opens the computer data files created during a Scanner computer download, enabling users to view, print, and export flow, event, and alarm logs and configuration data for sharing with others in a Windows[®]-compatible format or for satisfying audit requirements. The software also converts data to Flow-Cal[®] and PGAS[®] formats.

Users can view flow data in tabular or trend displays and create a customized template for generating professional reports that are personalized with a company name and logo.

Configuration interface

Cameron ModWorX Pro software is our custom interface for configuring and maintaining Scanner Series 2000 flow computers. Features include

- 12-point calibration
- real-time polling
- downloads of flow logs, configuration data, and event and alarm records
- configuration file upload tool for configuring multiple units
- PID tuning controls (for units that are factory-configured with the PID control option).

8	Lithium—Twin DD, 7.2 VDC square battery packs. Restricts transportation method	ds. Battery	pack may be pure	chased and shipped	separately from the Sca	nner 2100 compute			
	Expansion Board (If A1 is Selected, the Wireless Selections B0 and B1 are I	Vot Availa	ible)						
00	None								
A1	I/O type, one turbine flowmeter, two analog input, one analog output, one pulse	e input							
	Firmware								
00S	Standard	Op	ption	Position	Factory-Installed	Position in			
PID	PID control – requires expansion board (A1)			in Housing	Option	MVT Adapter			
	RTD Temperature Sensor Assembly	Μ	omentary switch	4	Momentary switch	6			
	Factory installation: CSA (X5) devices may be ordered with an optional MVT adapter to provide four additional conduit entries (see MVT code 4X or 4P). With this option, an RTD may be factory installed in the position shown.	То	ggle switch	2	Toggle switch	5			
			mmunication apter	1	Communication adapter	8			
	Not available with ATEX/IECEx (XB).	RT		_	RTD	7			
	Field installation in standard conduit entries: When the optional MVT adapter is not required, the RTD is shipped loose for installation in one of the housing's four standard conduit entries.		tenna	3	Antenna	_			
		<u>/ u</u>			Note: If the Scanner computer is equipped with the optional MVT adapter with four additional conduit				
	Consult Cameron for applicable model codes and part numbers for thermowells and RTDs				openings, the accessory op be installed in the adapter				
00	None				MVT adapter is not availab certification. Accessories ca	le with ATEX/IEC			
	External Explosion-Proof Communications Connector				the optional MVT adapter.				
Х	None				_
